

# MANUFACTURING

We pride ourselves in the fact that the Aegis Air Spoiler is made and manufactured in the great U.S.A. We are excited to announce the very first of its kind, an air spoiler system that facilitates optimal directionalized air current, in and around your UTV.

Dan Edwards, founder and manufacturer, operates the normal day-to-day operations in our Southern Idaho facility. Dan's insight and unique creative ability allows us to have the very best quality product in our industry. With over 3 years in R&D, the Aegis Air Spoiler has become a must have for all UTV riders.

Our Aegis team in Southern Idaho plays a vital part in the operations of overall quality control, customer approval and product distribution. With our state-of-the-art manufacturing and fulfillment facility, we are more than capable of meeting any consumer demand.

# FROM THE PRESIDENT

In 2011, we had one mission in mind: to develop a product that would revolutionize the side-by-side industry. With that mission in mind, we have developed a product that completely fulfills that mission. With over 3 years in research and development, we have a product we are proud of.

We understand that one of the most powerful instruments of our growth is the excitement you share with your families, friends, and co-workers. Your excitement for our products and the enthusiasm you share, directly impacts our success and over-all desire to truly "Change the Ride." We ask for your support, and hope that you are able to see first hand the quality you can expect here at Aegis.

It is your feedback that drives us to better ourselves and continue to increase our performance year after year. For 2015, we offer our brand new universal mounting system in matte black for UTV's larger than 50 inches. Together with our horizontal mount, this gives us two spoiler systems that will fit most every machine on the market today.

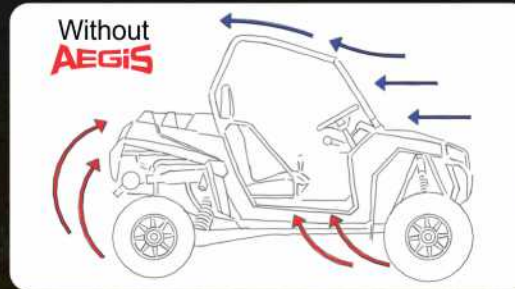

As the stand-alone leader in the industry for directionalized air on UTV's, we have a pulse on today's issues and concerns that affect how you ride your machine. We promise that we will continue to honor your support by implementing our integrity, product quality, and excellent customer service as we partner with you to truly "Change the Ride."

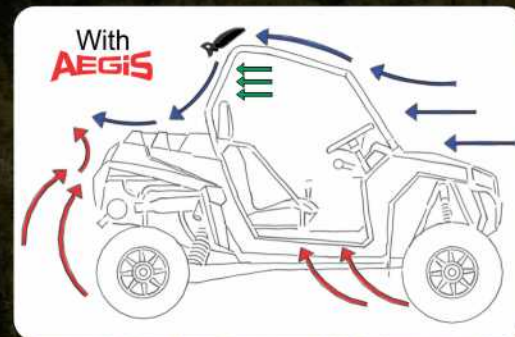

Sincerely,  
Dustin Edwards and the Aegis Team.

# THE SCIENCE

The functionality and efficiency of the Aegis Air Spoiler works in two very distinct ways. One, the spoiler works in conjunction with the amount of air flowing through the front of the cab by creating a vortex that establishes a vacuum-like action which pulls unwanted dust out of the cab. The second function is, due to this re-directed air being pushed down and behind the seats and out through the cargo area, that air prevents further infiltration of dust and dirt accumulation that billows up from behind the machine.

Therefore, this air current reduces additional accumulation in the cargo area. The functionality of the air spoiler system also prevents the dust from entering over the sides or the back of the cargo area, ultimately preventing dust and dirt from accumulating or being recirculated back into the cab from behind.

- Directionalized Air Flow
- Dust Sources
- Spoiler Created Vacuum Effect
